Indexed in Current Contents

Subject Index

A

A 23187 217–220
Acetate uptake, colon 205–209
Acid-base balance 79–81, 129–135
Adipose tissue 89–91
Adrenaline 37–43
Adrenergic control of bicarbonate absorption 159–164
Alcian Blue staining 21–27
Alpha adrenergic blocker 159–164
Amino-oxyacetic acid 177–183
Angiotensin II 211–216
Anion-osmotic hypothesis for exocytosis 249–253
Arrhenius plot 205–209
Atrial contraction 193–195
– coronary blood flow 193–195
Arteriovenous anastomoses 17–19
Awake state (AW) 149–157

B

Barium ion 255–260
Basal-lateral plasma membrane vesicles 11–16
Benzolamide 211–216
Bicarbonate 129–135
– absorption 159–164
– alkalosis 79–81
Blood gases 79–81, 197–204
– flow spleen 37–43
– –, tongue 17–19
Bradykinin 37–43
Brush border 11–16, 227–232

C

Ca-antagonist 221–226
^{45}Ca release 63–67
Calcium ionophore 217–220
Carbonic anhydrase inhibitor 211–216
Camera-type diameter gauge 261–265
Cardiac Purkinje fibers 169–175
Cardiorespiratory effects of hypothermia 79–81
Carotid body region 137–142
Carrier mediated phosphate influx in duodenum 227–232
Catecholamines 83–87
Cell viability 217–220
Cerebral ischemia 243–247
Cerebrovascular resistance in ischemia 243–247
Chemoreceptive process 137–142
Chemosensitive areas 53–61
Chronaxie of strength-duration curve 221–226
Chronotropic effect 1–9
Closed chest coronary artery catheterization 197–204
Cold exposure 83–87
– stimuli 17–19
Colon 165–168
Colonic epithelial cells 205–209
– motility 233–238
Contractile proteins 63–67
Convulsions 177–183
Coronary blood flow 193–195
Cupular movement 93–99

D

Defecation reflex 45–52
Diameters of small arteries 261–265
1,25-Dihydroxycholecalciferol 227–232
2,4-Dinitrophenol 217–220
Discharge properties of afferent fibres 111–121
– of neurons in chemosensitive areas 53–61
Duodenum 227–232

E

Electrical field stimulation 221–226
Electrically activity of isolated semicircular canal 93–99
Electrocorticogram (ECoG) 149–157
Electrolyte absorption 165–168
– transport 205–209
Electromyogram (EMG) 149–157
Elimination of erythrocytes from the circulation 69–73
Endocrine pancreas 249–253
Endolymph 93–99
Endothelial capillary swelling 243–247
Enterocytes 11–16
Epinephrine 1–9
Epithelial cell oxydative phosphorylation 217–220
– transport 217–220
Erythrocyte deformability 69–73
– uptake by dog's spleen 37–43
Essential hypertension 89–91
Ethane-1-hydroxy-1,1-diphosphonate (EHDP) 227–232
Exercise 83–87
Exocytosis 249–253
Extracellular potassium 169–175

F

Fetal and newborn lamb 149–157
– breathing 143–148, 149–157
Flexible arm 191–192
Flow resistance 75–78
– velocity in capillaries 75–78
Functionally skinned rabbit soleus 63–67

G

GABA-mediated inhibition 177–183
Gallamine 123–128
Gamma-vinyl-GABA 177–183
Gastric motility 233–238
Generator potential 93–99
Gliclazide 249–253
Glomerular filtration rate 211–216
Glucose 249–253
– -induced insulin release 249–253
–, renal transport 29–35
Glutamate 101–109
Goldfish semicircular canal 111–121
– vestibular nerve 123–128

H

Halothane 63–67
Heart block 193–195
– rate 83–87
Heatstroke 129–135
High frequency stimulation 111–121
– protein diet 165–168
H^+ gradient 205–209
H^+-sensitivity of neurons 53–61
Hypothermia 79–81

Hypovolaemia-induced vasopressin release 177–183
Hypoxaemia 197–204

I

Image sensor 261–265
Inner ear investigations 191–192
Insulin release 249–253
Intestinal water absorption 165–168
Intracellular calcium distribution 89–91
– potassium activity 169–175
Intramural nerves of the lymphatics 221–226
Inulin efflux from cortical slices 29–35
In vivo sac technique, colon 165–168
Ionophore A 23187 217–220
Isethionate 249–253
Isolated frog semicircular canal 93–99
– rabbit kidney 29–35
Isometric contraction 221–226

K

K^+ activity 101–109
Kidney, bicarbonate absorption 159–164
–, GFR regulation 211–216
– perfusion 29–35
–, phosphate transport 185–189

L

Lactate 83–87, 129–135
L-lactate 11–16
Local cold stimulus 17–19
Lumbosacral cord 233–238
Lymphatic smooth muscle 221–226
Lymph vessels 261–265

M

Maximum oxygen consumption 83–87
Mechanoreceptors, sensitivity of 111–121
Medulla oblongata 53–61
Membrane potential (MP) 101–109
– SH-groups 69–73
2-Mercaptopropionic acid 177–183
Mesenteric lymphatics 221–226
Mesentery 75–78
– potention 75–78
Metabolic acidosis 129–135
Micropuncture 185–189
Mitochondrial proton ATPase 217–220
Monosynaptic reflex 149–157
Morphometry of brain capillaries 21–27
Motility 233–238
Motoneurons 101–109
Muscular exercise 83–87
Muscle fibers 63–67
Myenteric plexus 45–52
Myocardial ischaemia 197–204

N

Na-dependent L-lactate transport 11–16
– – – phosphate influx 227–232
– -independent L-lactate transport 11–16
Nephron plasma flow 211–216
Nerve stimulation, splenic 37–43
Neuronal activity, spontaneous 53–61
– diameter spectra 239–242
– input resistance 101–109
Nipple attachment 191–192
Norepinephrine 159–164
NREM sleep 143–148, 149–157

O

Oligomycin 217–220
Osmotic swelling of endothelial cells 243–247
Ouabain 169–175
Oxydative phosphorylation 217–220
Oxygen consumption 79–81, 83–87, 129–135, 217–220
– partial pressure 137–142

P

Pacemaker depolarization 255–260
– potential 1–9
Pancreatic islets 249–253
Parathyroid hormone 185–189
Perilymph 93–99
pH 53–61
Phenoxylbenzamine 221–226
Phosphate 185–189
Plasma membrane 11–16
pO_2 137–142
Postganglionic sympathetic nerve 221–226
Postsynaptic action of glutamate 101–109
Potassium activity 169–175
– current 255–260
Probenecid 249–253
Propranolol 221–226
Prostaglandins 169–175
Proximal convoluted tubule 159–164
– tubule 185–189
Pulmonary gas exchange 197–204
Purkinje fibers 169–175

Q

Quantitative morphometry of brain capillaries 21–27

R

Rat brain PO_2 21–27
Reactive hyperemia 193–195
Receptor potential 93–99
Rectal motility 45–52
Recto-rectal reflex 45–52
Red cell deformability 75–78
REM sleep 143–148, 149–157
Renal bicarbonate absorption 159–164
– transport 185–189
Renin angiotensin system 211–216
Respiratory alkalosis 129–135
– response to somatic stimulation 143–148
Reticuloendothelial system 69–73
Retina 239–242
Retinal ganglion cell layer 239–242

S

1-sar, 8-ala angiotensin II 211–216
Sarcoplasmic reticulum 63–67
Semicircular canal 93–99, 111–121, 123–128
Senescent and damaged cells 69–73
Sensitivity of mechanoreceptors 111–121
Shear stress 69–73
Shunt circulation 197–204
Skinned fiber 63–67
Sleep 143–148, 149–157
– states in-utero 143–148
Slow inward current 1–9, 255–260
Single-lens reflex camera 261–265
Sinoatrial node 1–9
– node cell 255–260
Small intestinal brush border 11–16
Smooth muscle 221–226
Spleen 69–73
Splenic microcirculation 37–43
– venous pressure elevation 37–43
Spinal cord 45–52, 101–109
– motoneurons 101–109
– thermal stimulation 233–238
Spontaneous neuronal activity 53–61
Soleus muscle 63–67
Solute-coupled water absorption 165–168
Soma diameter spectra for classical neurones 239–242
Somatic stimulation 143–148
Stagnant blood 243–247
Staining of PO_2 microelectrodes 21–27
Stimulus-secretion coupling 249–253
Streptomycin action 93–99
Sucrose 249–253
Supraspinal center 45–52
Sympathetic activity 45–52
– nerves 45–52
Synaptic transmission 93–99

T

Tachycardia 193–195
Thermal stimulation 233–238
Temperature 79–81
– regulation 17–19
Tension transient and ^{45}Ca release 63–67
Tetrodotoxin 221–226
Thoracic cord 233–238
Thyroparathyroidectomy 185–189
Tongue blood flow 17–19
Transcellular glucose transport 29–35
Transfer functions 111–121
Tubular extrusion of D-glucose 29–35
– handling of phosphate 185–189

U

Urinary bladder 217–220

V

Vasopressin release 177–183
Venous hematocrit, spleen 37–43
– pressure elevation 37–43
Ventilation-perfusion ratio 197–204
Ventral medulla oblongata 53–61
Vestibular efferents 123–128
– Nerve 123–128
– system 111–121
Voltage clamp 255–260

W

Wakefulness 143–148, 149–157
Water absorption 165–168
Weak electrolyte transport 205–209
